cmake generate problem:

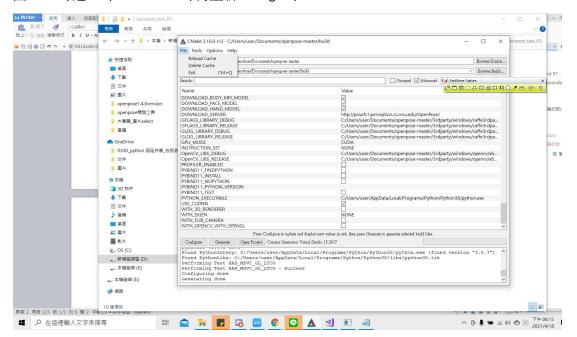

Solve 載入 pybind11:

https://blog.csdn.net/john_ashley/article/details/108831257

回 cmake/選 File/Delete Cache/再重新 configure/ Generate

problem:

glob.dll was not found opencv_world450.dll was not found gflags.dll was not found

solve:

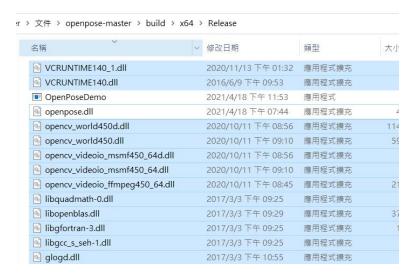

inside the bin directory - copy all of the dll files to the x64/release folder.

https://github.com/CMU-Perceptual-Computing-Lab/openpose/issues/547

複製 openpose-master\build\bin 全部檔案

貼到 openpose-master\build\x64\Release\資料夾內跟 openposedemo.exe 放一起

vs 2017 out of memory problem:

F0418 18:05:11.345847 14420 syncedmem.cpp:71] Check failed: error == cudaSuccess (2 vs. 0) out of memory

Ox00007FFD1ACE286E (ucrtbase.dll) (於 OpenPoseDemo.exe) 中發生未處理的例外狀況: 已要求嚴重的程式結束。

solve:
